

Acronis® Backup & Recovery™ 11 Advanced Server

Acronis® Backup & Recovery™ 11 Advanced Server SBS Edition

Acronis® Backup & Recovery™ 11 Workstation

Centralized Management with Integrated Disaster Recovery and Data Protection.

Acronis Backup & Recovery 11 Advanced is the next-generation disaster recovery and data protection solution from Acronis with centralized management. The Acronis advantage centers around patented disk imaging and bare metal restore technologies that provide fast and reliable backup and disaster recovery in Windows and Linux environments. Today, failed machines have to be returned to online status in minutes, sometimes seconds, rather than hours or days. Acronis helps businesses of all sizes meet these challenging Recovery Time Objectives. Organizations can automate backup processes for workstations and servers, across physical, virtual and cloud environments. After a disaster strikes, Acronis Backup & Recovery 11 restores servers, workstations or laptops to the same or different hardware or to virtual machines, providing highly flexible disaster recovery and migration options.

New and Improved Features

NEW! Disaster Recovery and Data Protection in One Unified Solution

- Adds deep catalog and search capabilities for granular access to specific data within a backup, so you get the benefits of bare metal restore and backup in one product
- Quickly and easily find any version of a file or application object¹, regardless of location or age
- Built to integrate with Acronis' granular application recovery modules such as for Microsoft Exchange Server¹ and Microsoft SQL Server™¹

NEW! Disaster Recovery Plans:

Automatically generated each time a backup completes, containing step-by-step instructions in case an IT administrator is not available

NEW! Improved Core Disaster Recovery Features:

- Ability to restore to dissimilar hardware with Linux
- Backup and recovery of systems that use UEFI/GPT

NEW! Reduce Long Term Storage Costs with Staging and add redundancy with Multi-Destination:

- Move old backups to tape (D2D2T) or less expensive disk (D2D2D)
- Store multiple backups locally and remotely on disk and in the cloud
- Back up to cloud directly (D2C) or indirectly (D2D2C¹)

¹ Available in an upcoming release

Core Features

Secure, Easy-to-use, Centralized Management

- Intuitive user interface makes it easy to install, configure and deploy
- Manage all backup and recovery from one console, anywhere on the network
- Enterprise-level reporting for more efficient management
- User authentication and data encryption (AES-256) secure storage, data access and transmissions

Fast Restore of Operating System, Applications, Files and Data

- Installs without reboots
- Use recovering systems while data is being restored with Acronis Active Restore™
- Easy recovery to the same or different hardware, including virtual machines, with Acronis® Backup & Recovery™ 11 Universal Restore™
- Enables mobile laptop users to recover a machine on the road with Acronis Secure Zone®

Physical/Virtual/Cloud in One Solution

- Supports Workstations/Servers, Windows®/Linux®, Disk/Tape/Cloud, VMware®, Microsoft®, Citrix® Red Hat® and Parallels®
- Manage backup and recovery of files, volumes, and virtual machines

Eliminates Redundant Data and Scales to Meet the Needs of Distributed Networks

- File and block-level deduplication reduces storage volumes by up to 90%
- Supports 1 to 3000 machines
- Supports up to 50 storage nodes with up to 20 managed vaults per storage node

Supported Operating Systems

Agent for Windows:

Windows 7, Windows Vista
Windows XP Professional SP2+
Windows 2000 Professional SP4+
Windows 2000/2003/2003
R2/2008/2008 R2 Server
Windows MultiPoint Server 2010

Agent for Linux:

Red Hat Enterprise Linux 4.x and 5.x
Ubuntu 9.04, 9.10 and 10.04
SUSE Linux Enterprise Server 10 and 11
CentOS 5, Debian 4 and 5, Fedora 11 and 12
Linux with kernel 2.4.20 or later and glibc 2.3.2 or later

Acronis® Backup & Recovery™ 11 Workstation

Centralized Management with Integrated Disaster Recovery and Data Protection.

Customer Benefits

Data Availability and Application Uptime

Acronis Backup & Recovery 11 provides a total solution with local and online disaster recovery and data protection to meet Recovery Time Objectives (RTO) whether physical, virtual or cloud. Quickly recover to dissimilar hardware or to a virtual machine. Plus, your data is safe with secure, encrypted backup.

True Ease of Use and Manageability

Be productive immediately with a single user-friendly console that enables administrators to perform tasks across multiple systems, workgroups and locations. It's so simple to use that even novices can create sophisticated backup and recovery plans.

Lower TCO

It's simply one application and one vendor for physical, virtual, and cloud. No new training is required.

Unique Selling Points (USP)

- One application and one vendor for physical, virtual and cloud
- Single solution for disaster recovery and data protection, plus supports disk, tape/libraries/autoloaders and cloud target storage options
- Ability to restore both Linux and Windows systems to dissimilar hardware and to recover servers that use UEFI and GPT
- Support for five hypervisors: VMware, Microsoft, Citrix, Red Hat, Parallels
- So simple to use that even novices can create sophisticated backup and recovery plans
- Automated generation of Disaster Recovery Plans per specific customer configuration to improve ease-of-recovery and Recovery Time Objective(RTO) while decreasing user error

Market

Acronis Backup & Recovery 11 addresses the needs of the two main markets:

- **Disk Imaging Backup and Recovery** – which allows you to capture an entire operating system, including applications, to enable fast recovery of entire systems in the event of disaster
- **File-based Backup and Recovery** – which allows IT managers to recover and search for individual pieces of data within a system and recover these quickly for their users

The emphasis in this market is on recovery, with organizations looking for solutions that improve Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs). In addition, server virtualization is causing re-architecture of backup infrastructures, driving organizations to improve their recovery capabilities. Plus, risk of downtime is great. 52% can only tolerate 1 hour or less.

Competitor Products

- Symantec Backup Exec Family
- CA ARCserve Family
